

Waste disposal at Port of Drammen

Fagerstrand, September 2009

Sludge and oily waste

Collecting, transporting and disposal of sludge: price pr. Litre NOK 1,15

Connection: DN 100 PN 16 (4 holes Out Diameter 220 mm hole to hole 180 mm)

For collecting and transporting, we use vacuum trucks.

If the sludge is to be pumped ashore onto the trucks, we need to know the pressure the pump aboard is giving.

The capacity of the trucks for sludge is 29.000 ltr.

Grey and black water

We understand that the term grey and black water, means grey water = water from washing and showering, and the term black water = water from toilets/septic.

For this, we can offer:

Collecting, transporting and disposal of grey/black water: price pr. Litre NOK 0,60

Connection : DN 100 PN 16 (4 holes Out Diameter 220 mm hole to hole 180 mm)

For collecting and transporting of grey and black water we will be using vacuum trucks.

If the sludge is to be pumped ashore onto the trucks, we need to know the pressure of the pump aboard the ship.

The capacity of the trucks for grey/black water is 12.000 – 15.000 litres.

If there is a need for, and it is possible to have storage tanks placed on the docks, we can provide tanks with a capacity of approx. 30 m3.

The rent and for these tanks will be NOK 500,- pr. day + the cost of transport of the tanks to and from the docks NOK 6000,-

Collecting, transporting and disposal of the materials from the tanks will be done at the above specified prices.

The prices above are based on collecting of the materials Monday – Friday in the period 07.00 – 15.00

If the collections have to be done outside the specified days and work hours, there will be additional cost of NOK. 330,- pr. person working on the trucks. There are 2 persons pr. truck.

All Prices are given ex vat.
